MASTERCLASS FUND

A subfund of F.A.M. UCITS SICAV

Marketing Communication

March 2025

Strategy

For the purpose of reaching the investment objective, the Sub-Fund will mainly invest in listed equities and equity-related securities (structured products included) with no constraints in terms of market capitalisation, currency and/or geography. The Sub-Fund can invest in developed markets as well as emerging countries. Investments in emerging markets cannot exceed 25% of the Sub-Fund's net assets. The sub-Fund will make no investments in companies with headquarters in China, Hong Kong and Taiwan.

Investors objective

The investment objective of F.A.M. Masterclass FUND (the "Sub-Fund") is to provide mid- and long-term capital growth by investing in a globally diversified portfolio of companies which have an exceptional track record of outstanding business performance. The Sub-Fund is actively managed without any reference to any benchmark index.

Reference Currency : **EUR**
Inception date : **01/10/2024**

NAV Calculation : **Daily**
Launch price : **100 €**

Synthetic risk indicator (SRI) :

0 1 2 3 4 5 6 7

The synthetic risk indicator (SRI), in accordance with the key information documents (PRIIPS-KID), makes it possible to assess the level of risk of this product compared to others. It indicates the probability of losses in the event of market movements or inability of the sub-fund to pay you. This indicator ranks risk on a scale of 1 to 7. A low score indicates low risk. A higher rating corresponds to a higher risk.

Monthly Manager Comment :

Trump made a mess by effectively imposing tariffs on aluminium, steel and autos, together with increased tariffs on all goods from China. That did shock and surprise the markets after all, with the MSCI World (USD) shedding -4.15% in March, and the S&P experiencing its worst quarter since 2022. Fears about the macro outlook and weaker earning expectations hammered hard on most companies, with the top 10 global companies losing -13.2% of their market cap to \$18.64 trillion (-\$2.83tn). The fund had its biggest monthly fluctuation, sadly a negative one of -7.05%. With investors losing faith in the US, still the world's biggest economy, the USD got sold off big time and lost -4.05% of its value. As the fund started the month with a 57% North-America exposure, that currency loss mainly explains the return difference.

Some new trends were brought on the surface. The doubt about American Exceptionalism, the flight from US companies and US dollar, the concerns about growth, the no longer cooling inflation expectations due to the price pressures that tariffs inevitable bring with them, the heightened risk about job losses. What makes it all very cloudy is the uncertainty caused by that ever unpredictable behavior of a bully president who doesn't understand or doesn't care that he is making America not great again, but small again. All good for gold as a safe haven, with new all time high at \$3123 per ounce, +9.3% this month!

Tactical rebalancing felt necessary due to all the above. First of all a big change in geographical allocation: the America exposure was severely brought down from 57% to 24%. Most of that USD money went to Europe, with the EU exposure being boosted from 23% to 55%! As a way of protection against the ongoing US sell-off and find probably better shelter in European currencies. Secondly, in the US the highest quality stocks were kept - and all financials were sold. European financials and industrial stocks were bought, with also attention to the defence sector. Europe seems at last ready to take its fate more in its own hands. Especially Germany, by allowing that in coming years approx. €900 bn will be spent and invested in foremost defence and infrastructure.

- Equities: Broader markets struggling to keep the bull trend intact. Nasdaq in bearish mode after losing more than 10% last quarter. So: danger that now negative sentiment lasts longer.
- Rates: The bond market didn't panic like the stock market, with rates barely moving. Yet the 10y German yield got jolted because of that new spending. US10y yield at 4.20% from ... 4.20%. US 2y yield at 3.88% from 3.99%. German 10y yield at 2.73% from 2.40%. German 2y yield at 2.04% from 2.02%. So: no recession priced in, neutral vs. equities.
- Commodities: No relevant price action. CRB commodity index +1.4 versus -0.5%. WTI Brent oil at \$71.4 from \$69.7. Copper again very robust at \$503 from \$451. These kind of numbers point to neutral economic demand. No heating, no cooling.

- Business cycle: As a result of the above analysis, strategy remains the same but with some clear-cut different sector- and geographical choices.

Change in Net Asset Value in € since launch (01/10/2024)

Past performance does not guarantee future results.

N.B. The management fees as well as any other costs which in accordance with the prospectus are charged to the sub-fund, are included in the calculation of the performance. The performance does not include any possible subscription fee (which may be deducted from the investment as a one-off initial charge). Additional charges may also be invoiced individually to the client (e.g. custody fees, commissions and other expenses). Custody fees should be detailed in the list of prices and services available from your bank. This product is subject to taxation which depends on the personal situation of each investor and which may change in the future. It is therefore excluded from the performance. These costs will further reduce the investor's return.

Glossary

UCI	The term "undertaking for collective investment" (UCI) is the general name used for all types of investment funds, regardless of their legal status. Depending on their legal status, we distinguish between UCIs with a contractual structure (mutual funds) and UCIs with a separate legal personality (investment companies). For UCIs composed of different compartments, the term "UCI" is also sometimes used to designate a compartment. The investor participates directly in a diversified portfolio that invests, for example, in stocks, bonds, cash and/or real estate, in accordance with the investment policy defined in the prospectus. UCIs are managed in the exclusive interest of unitholders by specialists who closely monitor market developments. Another term often used to refer to a mutual fund is that of "fund" or "investment fund".
Fund	The term "fund" is a common name for a collective investment undertaking (UCI). The term can designate a compartment of a Luxembourg Sicav, a collective investment fund or a compartment of a collective investment fund.
Sub Fund	A Sicav (investment company with variable capital) can be made up of several compartments, which means that it is divided into separate portfolios, each with its own investment policy. A prospectus detailing the specific investment policy is published when a sub-fund is launched. The advantage for investors is that they can move from one compartment to another at a lower cost and thus benefit from changing market conditions.
Structured products	Structured products are financial instruments whose performance or value is linked to that of an underlying asset, product or index.
Net Asset Value	The total value of all assets in an investment fund divided by the number of shares, net of expenses incurred by the fund.
Capitalisation Units	Capitalization units do not pay dividends but reinvest their income. When the unit is sold, the income accumulated through reinvestment is paid in one go in the form of a capital gain.
Developed Markets	Developed markets or countries have a high degree of industrialization, high division of labour, advanced infrastructure, and high standards of living. Most developed countries are democracies.
Emerging Markets	Emerging markets/countries (synonymous with emerging economies, growing countries and growth markets) are countries or markets whose level of development is lower than that of the West, but which are experiencing or could experience growth fast economical.
Equity Risk	Risk that the value of a Sub-Fund investing in equity and equity related securities will be affected by economic, political, market, and issuer specific changes
Currency Risk	Risk that the value of an investment denominated in currencies other than the Reference Currency of a Sub-Fund may be affected favourably or unfavourably by fluctuations in currency rates
Counterparty Risk	Risk of the inability of any counterparty (including the Depositary Bank) who to perform with respect to transactions, whether due to its own insolvency or that of others, bankruptcy, market illiquidity or disruption or other causes and whether resulting from systemic or other reasons.
Structured Product Risk	Risk to (i) movements in the value of the underlying asset including but not limited to currency (or basket of currencies), equity, bond, commodity index or any other eligible index, (ii) the risk that the issuer of the structured product defaults or becomes bankrupt
Sustainability Risk	Risk that an environmental, social or governance event or condition that, upon occurrence, could cause an actual or potential material negative impact on the value of the investment
Derivatives Risk	Derivative instruments may or may not achieve its intended objective and involves additional risks inherent to these instruments and techniques. In case of a hedging purpose of such transactions, the existence of a direct link between them and the assets to be hedged is necessary, which means in principle that the volume of deals made in a given currency or market cannot exceed the total value of the assets denominated in that currency, invested in this market or the term for which the portfolio assets are held. In principle no additional market risks are inflicted by such operations. The additional risks are therefore limited to the derivative specific risk
